## Revolutionizing Registry Abstraction Efficiency

### Automate, Accelerate and Optimize with ClearWay

ClearWay automates and optimizes the registry process, reducing the strain on healthcare teams and enhancing efficiency across identification, tracking, abstraction, and reporting. By transforming workflows, we help organizations reclaim valuable resources and focus on what matters most—improving patient care.

#### Proven Benefits:

- Significant time savings across every stage of the registry process
- Improved abstraction accuracy with consistent, reliable automation
- Accelerated processing speeds, freeing up resources for high-impact initiatives
- Optimized workforce utilization, shifting abstractors from manual tasks to strategic roles
- Reduced training demands, minimizing complexity in onboarding and cross-training
- Simplified registry management with standardized tools and processes
- Scalable and repeatable workflows, increasing flexibility in resource planning
- Expanded registry participation, enabling broader data-driven insights

**Total savings of 80% for Case Selection and Abstraction of STS/ACC TVT.** Phase 3 for the integration with the NCDR will save at least 50% or more of the average 10 minutes the submission takes on average.

**Initial + Follow-Up Abstraction Events**

**Patient Selection: 13**

**Abstraction: 82**

**Submission: 130**

#### Without Using ClearWay STS/ACC TVT Registry Abstraction

Tasks	Average Time Spent
Patient Case Selection	12 minutes
Abstraction	31 minutes
Submission	10 minutes
<b>Total on Average</b>	<b>53 minutes</b>

#### Using ClearWay STS/ACC TVT Registry Abstraction

Tasks	Average Time Spent	Time Savings Over Manual
Patient Case Selection	1 minute	11 minutes per case
Abstraction	7.6 minutes	23.4 minutes per case
<b>Total on Average</b>	<b>8.6 minutes</b>	<b>34.4 minutes SAVED per case</b>

# CLEARWAY

## Initial Abstraction Events\*

Patient Selection: **23**  
 Abstraction: **86**  
 Submission: **5**

\*No follow-up time study was performed in AFib. AFib follow-up is generally summarized by abstractors as adding 5 to 10 minutes to the review and is largely limited to noting the recurrence of AFib.

**Total savings of 59% for Case Selection and Abstraction of AFib Ablation.** Phase 3 for the integration with the NCDR will save at least 50% or more of the average 15 minutes the submission takes on average.

## Without Using ClearWay

### NCDR AFib Ablation Registry Abstraction

Tasks	Average Time Spent
Patient Case Selection	5 minutes
Abstraction	33 minutes
Submission	15 minutes
<b>Total on Average</b>	<b>53 minutes</b>

## Using ClearWay

### NCDR AFib Ablation Registry Abstraction

Tasks	Average Time Spent	Time Savings Over Manual
Patient Case Selection	1 minute	4 minutes per case
Abstraction	14.6 minutes	18.4 minutes per case
<b>Total on Average</b>	<b>15.6 minutes</b>	<b>22.4 minutes SAVED per case</b>

**Note:** These are numbers from our preliminary time study. The abstractors expressed confidence for additional efficiency after getting more familiar with the ClearWay platform and ongoing improvement of flagged fields. For reference, the TVT registries have 955 fields and the AFib registry has 355 fields.

## Unlock Greater Efficiency Today

ClearWay is redefining the future of registry abstraction. With automated workflows, streamlined processes, and significant time savings, your team can focus on high-value initiatives.
