

6 BENEFITS OF ARCHIVING DATA

Archiving everything from EMR data to ERP data can benefit your entire healthcare organization. Let's take a closer look.

CONSOLIDATE DATA

Have one system instead of multiple, disparate systems. Consolidate acute, ambulatory and other business data silos into one central location with archive document data storage.

DECREASE COST

Maintenance fees and operational costs of keeping legacy systems up and running are expensive. An archive can reduce licensing fees and overall IT operational costs, resulting in substantial savings.

ENSURE COMPLIANCE

Retain required records as long as needed, mitigate legal risks, and define a long-term data governance plan that maximizes technology to secure records in a HIPAA-compliant format.

INCREASE SECURITY

Data stored in outdated systems or running in read-only mode is vulnerable to cyberattack and technical breakdown. Fortify defenses against these threats with fewer entry points.

ENHANCE EFFICIENCY

Save time by accessing historical data from a single source allowing for enhanced efficiency with streamlined workflows, decreased wait times, and higher patient satisfaction.

SIMPLIFY REPORTING

Get the information you need fast. Generate standard audit reports with record access date and time stamps at either the user or the patient level.

LEARN MORE
