HEALTHDATA ARCHIVER

Product Brochure

Integrated, Secure Historal Record Access

Meet data retention requirements, cut costs and fortify cybersecurity defenses by consolidating data silos with a healthcare data archiving solution designed to provide secure storage and easy access to legacy records.

Avoiding the Risks

If your healthcare organization still has legacy EMR or ERP systems up and running, you may be overspending on maintenance and labor as well as vulnerable to cyberattack. Compliance and legal risks may also be encountered if you cannot access or deliver a record. According to regulations of the 21st Century Cures Act, all data must be interoperable.

The Solution

A best-practice solution is to extract and migrate the data into a single, secure archive. Avoid the cost and complexity of a full system conversion with an active archive solution. An archive puts historical records where you need them, when you need them, all while ensuring legal compliance. With an archive in place, legacy systems can be decommissioned, eliminating the maintenance cost, technical risk and IT labor burden.

Why to Archive

- System Replacement
- Merger & Acquisition
- Facility Closure

Data Extraction Types

- Discrete, Images and/or Blobs, Scanned Documents & More

Technical

- Single Sign-On
- Hosted or On-Premises
- Virtual Server Deployment
- Browser and Device Variable
- Active Directory Managed Access (LDAP/OpenID)

HealthData Archiver® provides compliant storage of legacy patient, employee, and business records in a HITRUST CSF® Certified environment.

ARCHIVER

Enhance Organizational Workflows

With an easy-to-use interface and rich workflows, our active archive, HealthData Archiver®, is intended for daily use by a variety of users and can increase efficiency across departments.

HIM
Release of Information, Addenda, Purge and Other Workflows

Clinical
Patient-Context Singe Sign-On Access from the Go-Forward EHR

Revenue Cycle
Collection Workflows and Agency Management for A/R Wind Down

Human Resources
Access to Employee Records: W2s, Payroll, OSHA, Attendance & More

Key Features

- Clinical Views
- Search/Sort/Filter
- Data Views
- Error Correction & Alternate IDs
- DICOM Viewer
- Notes and Comments
- Release of Information
- Role-based Security & Access Tracking
- Standard Reporting
- A/R Management

Integrations

- Single Sign-On from EHR
- Legacy Record Indicator
- MPI Backload & Sync
- Secure Record Delivery
- ODBC/JDBC Reporting API
- Third-Party Auditing

A/R Management Options

Transaction Posting Module
Management of patient and collection agency balances.

Collection Agency Management
Management of outsourced agency transactions and balance reconciliation.
(Bundled with Transaction Posting Module)

HealthData AR Manager®
Comprehensive management of billing and collections for robust legacy A/R records wind down.
