

HealthData Planner™

Expert application rationalization at your fingertips

Enterprise IDNs or other provider organizations with a merger and acquisition strategy can rack up a large number of legacy applications within their organization.

A key component of any successful healthcare IT and governance team is a thorough understanding of their organization's clinical, financial and business application landscape. These applications, where vital records are stored, can often become disorganized and overwhelming, especially when it's time to develop a legacy data strategy.

Instead of using antiquated spreadsheets to document these details, HealthData Planner™ provides a modern, secure and collaborative online approach for a single source of truth that can help guide your legacy data plan.

HEALTHDATA PLANNER

Application Rationalization

Need an informed plan?

Talk to the experts today.

HealthData Planner™ can help you:

- ✓ Inventory Applications
- ✓ Capture Data Source Details
- ✓ Prioritize Decommissioning

“By reducing your application portfolio you have the opportunity to really reduce the operational burden of maintaining availability of systems, of maintaining access to them, of maintaining any backups and redundancy for preservation of the data. These things have a cost to them and they're a big part of what helps build a compelling ROI for doing what we call "application rationalization".

Lorri Page-Santacruz

Director Enterprise Architecture, Northern Light Health

Capture All the Details in One Place

Application Information

Capture key data elements and details around each application you plan to decommission, such as system name and version, database type, size and specifications, as well as modules to be archived and interfaces.

Project/Implementation Information

Note responsible parties, assumptions/notes, and desired options and integrations for Harmony Healthcare IT products and services.

Your Information

Record contact details for your key project members, as well as important data decisions such as database platform, deployment location and third-party integrations.

Harmony Healthcare IT Information

Reference contact information for your Account Manager and Project Manager, as well as your sales order number and project details.

Document

In collaboration with your Account Manager, document your legacy system inventory targeted for decommissioning. This includes comprehensive data source details to inform statements of work and operational hand-offs.

Proper work up-front saves time throughout the project.

Collaborate

Eliminate the back-and-forth emails and spreadsheets by collaborating in a digital experience with us. Establish a login for your legacy application subject matter experts that allows them to add/modify/delete systems and details, and share notes with your Account Manager.

Prioritize

Allow the online inventory to serve as a roadmap for systems to decommission.

We consult with you to develop the most efficient and cost-effective system decommissioning schedule.
